

*The Time for Action is NOW!*

*A Breakthrough is Needed.*

*YOU Can Make a Difference!*

Over the past 17 years Dr. Steven Greer and his team have extensively researched the most promising inventors and technologies available on the planet today. They have traveled the globe investigating scores of inventors, and witnessing an exhaustive range of technologies from the impossible to the miraculous. From this painstaking work they have narrowed their scope to a handful of the most brilliant inventors and the most promising technologies. Heretofore, these inventors have been valiantly struggling forward to bring earth-saving technologies out to the world. Usually, these committed and intrepid pioneers are operating with:

- low budgets
- very limited equipment in their personal shops
- little or no access to other brilliant people to spur their thinking
- frequent strong skepticism and outright ridicule.

## *The Breakthrough Campaign*

The mission of the **Breakthrough Campaign** is to bring the very best inventors in the world of sustainable, non-polluting, “free” energy together under one roof to achieve a very specific objective. Our ultimate goal is to produce an Energy Generating System for the home or business, which will forever transform the current energy paradigm. The charter for our inventor team is to create a free energy generator for the global general public that frees us from dependence on costly, limited, and polluting fossil fuels. Below are the technical description and performance criteria for this mission:

The desired generator technology is an energy generating device that produces more output energy in usable, commercially viable power than is required to run the system. The technology is over unity (more output than input energy) and is commercially viable for running typical electrical appliances in homes, businesses and industry. The device must provide the following features:

- 1) Be completely independent of the power grid. The device should be able to function as a complete “stand alone” system operating for an indefinite period of time with no connection of any kind to the existing electrical grid or any other power supply system. ( Ultimately, the device *may* be hooked to the grid to feed its own excess power back to the utility company but only after demonstrating its performance as a standalone system. )
- 2) Self starting – the device should be able start from its own power supply; i.e. battery or capacitor.
- 3) Self charging – means should be included that enable the device to recharge its starting system from its own power while simultaneously running a load.
- 4) The device should consume no external fossil-based fuels of any kind.
- 5) Significant usable power – ideally the device should deliver 5-10KW of net usable electrical power over and above what is needed to recharge its starting circuit / mechanism. This would be either 120 or 240V, 60 cycle, AC current sufficient to power typical household or commercial electrical devices; i.e. lights, computers, refrigerators, electric heaters, microwave oven, stereo, television, etc.
- 6) While a lower power prototype may likely be necessary for proof of concept / development, a robust demonstrator unit in the 5-10KW range is necessary to prove commercial viability of the technology. Such a robust demonstrator is essential for The Orion Project to fulfill its strategic mission.
- 7) This technology may involve unique circuitry, gearing and wiring of electric motors, alternators, etc. that result in this over unity effect; providing commercially viable power generation in the multi-kilowatt range, be self running and charging while simultaneously running a load.

***It is time for the Breakthrough!!*** The Orion Project has launched a campaign to bring the brightest inventors on the planet together, under one roof, to collaborate with one another to develop the first consumer-friendly, non-polluting, sustainable free energy generator. To achieve this, our goal is to raise \$3 Million in the next 60 days. This will allow us to:

- Lease an adequate, well-equipped research facility
- Bring a core group of the most brilliant inventors together under one roof
- Support them with a full-time skilled and available technical staff
- Provide professional project management to coordinate and support activities
- Align everyone toward the attainment of this single objective
- Provide 12 months of intensive activity to produce the desired result

So much has already been achieved by these inventors operating independently under the most adverse conditions. Bringing them together, with full support, clear direction, and aligned effort will certainly produce the Breakthrough humanity so sorely needs.

We are appealing to the general public and private donors to achieve this goal.

\$3 Million in 60 days requires only 1,000 people / day to contribute \$50. Given the global reach of the internet, such a humble goal is absolutely in reach. Larger contributions, of course bring the goal to fruition even more quickly. All donors will receive a monthly newsletter updating you of recent activities and progress toward the goal.

Please be part of the solution and support The Breakthrough! The time for action is NOW!!

For more information or to contribute on-line please go to [www.theorionproject.org](http://www.theorionproject.org) or simply fill out the form below and return it today. Your help WILL make the difference!! **THANK YOU!!**
